

UNIT- I

Advanced DBMS and Administration (Question Bank)

Unit 1

1. What is Normalization? Explain 3NF with example.
2. Explain different rules of equivalence of expression.
3. Explain estimation of query processing cost in detail.
4. Write note on:
 - i) Hash Join
 - ii) Merge Join
5. Explain query execution plan.
6. Explain 3NF and 4NF in Normalization.
7. Explain Query Processing stages in detail.
8. Write a note on:
 - (i) Query Execution plan
 - (ii) Multiple Index Access
9. What is Query Interpretation? Explain Query resource Utilization.
10. Write the methods for Joining tables in a DBMS?
11. What do you mean by Normalisation? Explain 2NF and 3NF with suitable example.
12. Explain Query processing stages in detail.
13. Write note on:
 - i) Functional dependencies.
 - ii) Structure of Query optimizer.
14. Explain lossless joins and dependency preserving decomposition query processing.
15. Write note on Multiple Index Access.
16. Explain Rollback segment tuning.
17. What are the contents of trace file and alert log file?
18. Explain process of database configuration of I/O issues.
19. Explain how Oracle blocks are used efficiently.
20. Explain 1NF in detail.
21. What is normalization? Explain 4NF with suitable example.
22. Explain the structure of query optimizer with suitable diagram.
23. Write note on following:
 - i) Merge Join
 - ii) Hash Join
24. What is Equivalence of Expressions? Explain different equivalence rules.
25. Explain lossless join decomposition with one example.

ITM-NCA
